IIS Joint Development and Implementation (JDI) Project Summary (version 2)

This summary outlines the basic information needed for a joint development and Implementation (JDI) project supported by AIRA and IIS programs, IIS vendors/implementers, and invested partners.

AIRA's primary objective for the JDI strategy is to develop and implement collaborative projects and services. For these projects, AIRA will provide, at minimum, project management and administrative support as needed. Project management will include leadership to address additional resource needs as feasible. Further project funding and in-kind support will be provided by participating parties as dictated by the project selected.

Basic Project Information	
Project Title	Provide Guidance for Implementation of IIS-IIS Interjurisdictional Exchange
Project Type *See project type list for definitions*	Operational and/or Technical Guidance: Crafting of requirements, recommendations, and reference materials for development and/or implementation
Project Description and Output *A brief overview of the project*	Develop guidance and support for voluntary implementation of IIS-IIS Interjurisdictional Exchange. The output would be a guidance document that provides recommendations on technical, policy and programmatic aspects of IIS-IIS exchange.
Background or Context *A summary of the problem(s) that the project is trying to solve*	IIS Interjurisdictional Exchange is a growing priority across the IIS community. As the US population continues to become more mobile, there is a greater need to query and exchange information across jurisdictional lines. Many regional exchanges are already underway, either between neighboring jurisdictions (OR-WA) or between city-and-state jurisdictions (NYS-NYC). In addition, discussions are underway exploring the possibility of adding an IIS Functional Standard focused on interjurisdictional exchange. Given these and other efforts, there is a growing need to provide a comprehensive and centralized view of IIS-IIS data exchange activities across the US, as well as a need to develop a more comprehensive policy, technical and programmatic strategy.
Existing Standards or Guidance to Support the Project	
Existing Test Data or Testing Tools to Support the Project	
Related Projects *Projects already in motion that may affect this project, and their anticipated impact*	
Potential Participating Parties	
Potential Additional Stakeholders	
Potential Platforms/Systems Benefiting from Project	

Strengths of Selection as a JDI Project *A list of the reasons this project would be a stronger project if completed collaboratively rather than if completed by individual programs*	• Interjurisdictional exchange is a high priority for many providers/end users. • Network for Public Health Law and ASTHO are willing contributing partners in this effort. • Interjurisdictional exchange is in the draft set of functional standards being circulated by CDC for 2018-2022.
Challenges of Selection as a JDI Project *A list of the reasons this project would be a challenge as a collaborative project rather than if completed by individual programs*	• A joint project between AIRA and ASTHO to support IIS-IIS exchange through a Community of Practice is already underway. These project would need to be merged. • IIS-IIS exchange may be a lower priority for IIS with more pressing issues. • There is no recognized source of funding to support IIS-IIS exchange currently.
Perceived Funding Needs *How resource-intensive is this project likely to be?*	
Potential Resources Available *Including financial resources and in-kind support*	
High-Level Project Risks *Including financial, legal, contractual, or other*	
Anticipated High-Level Timeline	
Anticipated Project Disposition *Will project outputs be available to other IIS programs? Will there be costs or licensing fees?*	
Perceived Need/Urgency *Is this a high priority for the community?*	❏ High X Medium ❏ Low
Viability as a Joint Development Project	X High ❏ Medium ❏ Low

Additional Information
Use this space to provide any additional information about the project not addressed above.
